

Portpack UK Limited

Portpack UK Limited possess a wealth of applications knowledge and design experience in the field of containerised mobile bagging systems and fixed plant. We handle free flowing fertilizers, food grains, and similar bulk shipped 'dry' materials in some of the most arduous conditions in the World.

Our equipment has been supplied to Angola, Djibouti, Eritrea, Haiti, Jordan, Kenya, Mauritania, Morocco, Nigeria, Pakistan, Romania, Saudi Arabia, Sri Lanka, Syria, Tanzania, Venezuela, and Yugoslavlia.

Portpack equipment is built in Nottingham, United Kingdom to high engineering standards, by a team of engineers fully conversant with the product since its conception. The equipment incorporates many unique features as a result of feedback from our customers and the market all of which combine to maximise output and efficiency.

Our equipment is technically advanced and can produce 25, 50 and 100Kg open mouth bags and 500, 1000 and 1500Kg big bags. The majority of our equipment is constructed from Stainless Steel and assembled at our own facilities.

Portpack offer competitive prices and realistic deliveries. Our customer commitment is total, in addition to the supply of new units, we provide spare parts support and our own Engineers to erect and commission equipment.

Mobile Bagging

The core product of Portpack UK Limited is the Containerised Mobile Bagging unit. The basic function of this unit is to weigh and bag large quantities of free flowing, dry bulk

materials (grains, granular fertilizers, etc) unloaded directly from ships into the bagging plant alongside, weighed and discharged into open mouthed bags, which are then stitched and loaded onto waiting trucks.

As speed of discharge is important, in terms of avoiding demurrage charges, we have designed our equipment to perform at optimum rates, between 120 and 140 metric tonnes per hour from two lines.
